RE: Increase in height of fence by two (2) feet for previously approved project (11389-18A)
Address: 999 Melchoir Court, Gilroy, CA 95020 [APN 783-17-045]

Project Description

The proposed project consists of increasing the height of the Redwood Fence on a previously proposed project by two (2) additional feet. This height change would be from a 6ft fence to an 8ft fence.

Project Justification

Due to the need for a change in the backup generator power, the equipment previously approved for project 11389-18A needed to be updated. This original generator proposed is no longer acceptable for PG&E facilities and therefore is required to be replaced with an acceptable unit that is taller and sits slightly above the 6' tall fence line. Although having ground equipment visible is not the preferred design, given that this site serves as a First Responder communication facility; it is imperative to retain backup generator power in the event of an emergency when communication services are most important. Due to the change in equipment located within the leased area being visible above the 6 ft fence, there is now a need for a modification to the previously approved project (11389-18A). The only change in this proposal is the need for the Redwood fence to be 2 ft. higher to conceal the enclosed facilities equipment.

Should you have questions regarding this project, please do not hesitate to contact the undersigned.
