Re: Responses to revised incomplete letter dated 11/3/2022 Revised on 6/27/23  
Project Address: Hayes Lane – APN 779-44-014  
Plan Review Number: PLN22-184

**Additional Information / Issues of Concern:**

1. The recreation accessory structure has been revised to propose 2 plumbing fixtures.
2. As discussed in our 11/22 meeting, this comment was focused on the accessory structure. I have added additional information to the statement of justification on how a tiered approach to this structure is not possible due to the use (tennis court). The slope in the area of the accessory structure is also in a non-visible area to limit any impacts to the viewshed.
3. The garage has been fully detached to qualify as a detached structure.

**Planning:**

1. Please find the petition for exemption from environmental assessment form included in the resubmittal.
2. The top of banks and 35-foot setback have been added to the site map on sheet C1.
3. The architectural and civil plans have been combined.
4. Please see revised architectural plans for calculation diagrams.
5. Grading quantities for the pool have been added to the table.
6. Please see revised materials board in the resubmittal.
7. Noted. A report was not performed. If archaeological resources are encountered during the project, work in the immediate vicinity of the finds will be halted until a qualified archaeologist has evaluated the situation.

**CALFIRE:**

8. Hayes lane from Watsonville Road to the project site was measured and the width exceeds 20 feet in all portions leading up to the site. The road was found to have a width of 20 to 23 feet. A note has been added to the plans. Please see updated CALFIRE notes on sheet C1.
9. Correspondence between CALFIRE and I show that a turnaround would not be required because the driveways are less than 300 feet in length. Turnouts have been added to each driveway. Email correspondence has been included in the resubmittal.
10. A note has been added on sheet C2 for gates if they are proposed.
11. A note has been added to sheet C1 for defensible space requirements.

**Fire Marshal:**

12. Noted.
13. Two standard hydrants are now proposed to meet this requirement.
14. See previous comment.
15. Please see included will serve letter.
16. Turnouts meeting the PRC 4290 have been added to each driveway.
17. As stated in a previous response, the driveways are less than 300 feet and will not require a turnaround meeting the PRC 4290.

18. Noted. The driveway slope going to the ADU has been updated to a maximum of 15%. There was small increase to the grading quantities, but the 15% driveway won't require a variance and is safer for emergency vehicles.

**Land Development Engineering:**

19. Limits of the disturbed area have been added to the plans. The project disturbs more than 1 acre and will be required to file with the state waterboard.
20. Hayes Lane was measured about every 100 feet from the entrance at Watsonville Road to the project site. The width was found to vary between 20 feet and 23 feet. Please see the added sheet C4.
21. The driveway approaches have been designed to meet the county standard. Please see sheet C3 for details.
22. The driveway width is shown to remain. Once the turnouts were designed per Fire Marshal's comments, the length of the 16' wide sections are very short and the grading is extremely minimal for these slightly wider sections. The width was originally designed wider than the minimum set by SD2 because the property owner owns a larger RV and frequently has a truck and trailer that will access the site.
23. This option was discussed in or 11/2022 meeting. I performed a preliminary design to check the grading quantities. Connecting the two driveways to eliminate a driveway approach would cause the need for a larger PRC 4290 turnaround and increase the grading quantities. Connecting the two driveways to eliminate the turnaround near the ADU would cause the accessory structure to be relocated closer to the driveway entrance. This causes the structure to be in a visible location from the valley floor. To accomplish the driveway connection, the driveway would have to pass over the OWTS drain field. The percolation tests required to design the OWTS are not guaranteed to pass in any other location. Moving the OWTS and placing the accessory structure in a visible location did not justify (in our opinion) the minimal reduction of the grading. For these reasons the driveway design was left as originally proposed.
24. Please see the added sheet C4 for the legal access.
25. Please see included preliminary title report.
26. Please see the included questionnaire.
27. Utilities have been added to the plan.
28. The stationing for the ADU driveway has been updated.
29. A new section through the garage has been added as C-C. The other section names have been updated.

**Geology:**

30. Please see attached response letter from the geologist and geotechnical engineer.

Please let me know if you have any questions or need any additional information.

ENGINEERING GEOLOGY GEOTECHNICAL HYDROGEOLOGY SEPTIC TESTING & DESIGN

July 6, 2023

File No: 280611 L1

Mr. Abhishek Parmar  
3155 Greer Road  
Palo Alto, CA 94303

Subject: **RESPONSE TO COUNTY COMMENTS**

APN: 779-44-014  
Santa Clara County, California

Dear Mr. Parmar:

This letter addresses comments made by the Santa Clara County Geologist Mr. David Seymour in County Review Letter dated, November 3, 2022. We understand clarification of certain geologic issues are needed. This letter is intended to supplement our previous report for the subject property. That report was titled *Engineering Geologic and Geotechnical Soils Investigation*, dated August 29, 2022. The reader is referred to that report for the details therein. We have responded in order of the County's review comments.

We have updated our *Project Site Engineering Geologic Map* (Attachment 1) and *Updated Engineering Geologic Cross-Sections A-A' and C-C'* (Attachment 2) to reflect the proposed grading at the project sites.

1. Using the provided grading plan we have calculated the distances from the proposed constructions to the identified scarps in the cited report. All are outside the recommended setback. The proposed house is approximately 74 feet away and the proposed ADU and barn are approximately 69 feet and 66 feet respectfully. See number 3 for *Updated Slope Stability Analyses*.
2. We have updated the seismic design parameters to reflect the underlying geologic conditions as well as updated the CBC to the most recent code using the following tool at <https://asce7hazardtool.online/>.

|  |  |               |
|--|--|---------------|
| Site Coordinates   |  | N 37.077931°  |
|  |  | W 121.641437° |
| Seismic Design Category  |  | II            |
| Site Class   |  | C             |
| PGA <sub>m</sub><br>(2% probability of being exceeded in 50 years) |  | 0.60 g        |
| Site Coefficient, F <sub>a</sub>                                   |  | 1.0           |
| Site Coefficient, F <sub>v</sub>                                   |  | 2.83          |
| Short Period Acceleration, (0.2 sec), S <sub>s</sub>               |  | 1.63 g        |
| Long Period Acceleration., (1.0 sec), S <sub>1</sub>               |  | 0.60 g        |
| SM <sub>s</sub>  | F <sub>a</sub> x S <sub>s</sub>                  | 1.70 g        |
| SM <sub>1</sub>  | F <sub>v</sub> x S <sub>1</sub>                  | 1.86 g        |
| SDs  | 2/3 x SM <sub>s</sub>                            | 1.15 g        |
| SD <sub>1</sub>  | 2/3 x SM <sub>1</sub>                            | 0.57 g        |
| Seismic Kh (Figure 1 SP 117a, 2018)                                | (PGA <sub>m</sub> /1.5) x Median F <sub>eq</sub> | 0.264 g       |

3. We have updated our slope stability analyses to include the updated CBC information and proposed grading at the site. The revised seismic coefficient used in our updated analysis is 0.264 for an earthquake of magnitude 7.9 M<sub>w</sub> at about twelve km on the San Andreas fault, in accordance with values obtained from *ASCE 7 Hazard Tool (ASCE7-22)* and using procedures listed in SP117a (2008) for a threshold displacement of five cm. The site is at approximately 37.077931°N and 121.641437°W, and the Maximum Horizontal Acceleration (PGA<sub>m</sub>) was listed as 0.60g. Our analyses gave wide degrees of freedom for the resulting shear plane to move from near surface to below the assumed shear plane. Attachment 3 shows the *Updated Slope Stability Analyses Data Sheets*.

The C-values (cohesion, in psf) and phi angle (in degrees) strength parameters used in the analyses were the same as our cited report. Table 1 shows the results of our updated slope stability analyses.

**Table 1**  
**Slope Stability Analyses**

| Cross-Section | Description | Static Factor of Safety | Pseudostatic Factor of Safety |
|---------------|-------------|-------------------------|-------------------------------|
| B-B'          | Qls B       | 3.43*                   | 1.09*                         |
| C-C'          | Qls A       | 2.14*                   | 1.01*                         |

\*Denotes analyses that passed the minimum industry standard Factor of Safety.

The results show that the Landslides A and B as modeled are considered mathematically stable under static conditions and met or exceeded the minimum industry standard for the Factor of Safety of 1.5 for static. The results show that Landslides A and B are considered mathematically stable in

the event of the modeled earthquake as they meet the minimum industry standard for the Factor of Safety of 1.0 for pseudostatic. The results show that the project sites are considered mathematically stable under static and pseudostatic conditions as they meet the minimum industry standard for the Factor of Safety of 1.5 for static and 1.0 for pseudostatic.

4. The owner(s) should contact the County Geologist for assistance in satisfying this requirement.
5. Please see Attachment 4 for *Updated References*.

We wish to re-emphasize that proper drainage of the subject property is essential. Maintenance of all drainage facilities, particularly during periods of high rainfall, is extremely important. All recommendations of the referenced reports must be carried through in the construction of this project. The *Limitations* of the referenced report are included herein by reference and are therefore not repeated here.

We are pleased to have been of service to you at this time. Please do not hesitate to call us if you have any questions regarding this project, or if we can be of any other service. Thank you.

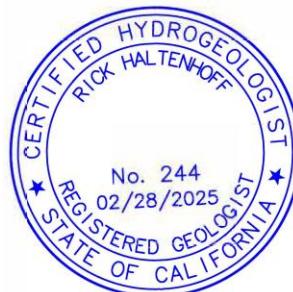

Very truly yours,

## RESULTS: Analysis 1 - Engineering Geologic Cross Section B-B' with Proposed Grading

## Spencer-Wright Method of Analysis - Circular Failure Surface

## Critical Failure Surface Search using Multiple Circle Generation Techniques

Initial failure surface approximation - Factor of Safety: 5.548      Final Angle of Interslice Forces (Theta): 5.7 degrees

## Analysis Summary

There were: 630 successful analyses from a total of 1001 trial failure surfaces (Theta filter applied)  
216 analyses terminated due to unacceptable geometry  
155 analyses that failed to produce a valid result

Critical (minimum) Factor of Safety: 3.43

Final Angle of Interslice Forces: 7.9 degrees

Negative interslice forces exist on one or more slices; examine slice data and consult the GALENA Help utility

Results Summary - Lowest 99 Factor of Safety circles

| Circle | X-Left     | Y-Left     | X-Right    | Y-Right    | X-Centre   | Y-Centre   | Radius  | FoS   | Theta | <-- Critical Surface |
|--------|------------|------------|------------|------------|------------|------------|---------|-------|-------|----------------------|

### Analysis 2

Multiple Stability Analysis

Method: Spencer-Wright

Surface: Circular

### Results

Critical Factor of Safety: 1.09

Interslice Force (Final) Angle: 3.7°

Edited: 17 Jul 2023 Processed: 17 Jul 2023

**Associated Terra Consultants, Inc.**

DATA: Analysis 2 - Engineering Geologic Cross Section B-B' with Proposed Grading

Material Properties (4 materials)

Material: 1 (Mohr-Coulomb Cu increases with depth) - Jos

| Cohesion | Phi  | PI | UnitWeight | Ru   |
|----------|------|----|------------|------|
| 589.00   | 15.0 | 15 | 95.00      | 0.10 |

Material: 2 (Mohr-Coulomb Cu increases with depth) - fm

| Cohesion | Phi  | PI | UnitWeight | Ru   |
|----------|------|----|------------|------|
| 674.00   | 23.0 | 15 | 95.00      | 0.10 |

Material: 3 (Mohr-Coulomb Cu increases with depth) - Qls

| Cohesion | Phi  | PI | UnitWeight | Ru   |
|----------|------|----|------------|------|
| 872.00   | 11.0 | 15 | 100.00     | 0.10 |

Material: 4 (Mohr-Coulomb Cu increases with depth) - Qaf

| Cohesion | Phi  | PI | UnitWeight | Ru   |
|----------|------|----|------------|------|
| 100.00   | 25.0 | 15 | 125.00     | 0.10 |

Water Properties

Unit weight of water: 62.430

Unit weight of water/medium above ground: 0.000

Material Profiles (6 profiles)

RESULTS: Analysis 2 - Engineering Geologic Cross Section B-B' with Proposed Grading

Spencer-Wright Method of Analysis - Circular Failure Surface

Critical Failure Surface Search using Multiple Circle Generation Techniques

Initial failure surface approximation - Factor of Safety: 1.806 Final Angle of Interslice Forces (Theta): 3.6 degrees

Analysis Summary

There were: 579 successful analyses from a total of 1001 trial failure surfaces (Theta filter applied)  
216 analyses terminated due to unacceptable geometry  
206 analyses that failed to produce a valid result

Critical (minimum) Factor of Safety: 1.09

Final Angle of Interslice Forces: 3.7 degrees

Negative interslice forces exist on one or more slices; examine slice data and consult the GALENA Help utility

Results Summary - Lowest 99 Factor of Safety circles

| Circle | X-Left     | Y-Left     | X-Right    | Y-Right    | X-Centre   | Y-Centre   | Radius  | FoS   | Theta | <-- Critical Surface |

## Failure Surface

Initial circular surface for critical search defined by: XL, XR, R

Intersects: XL: 6230229.00 YL: 1852063.12 XR: 6230426.00 YR: 1852109.25  
Centre: XC: 6230274.50 YC: 1852313.00 Radius: R: 254.00

## Variable Restraints

|                               |       |        |       |
|-------------------------------|-------|--------|-------|
| Parameter descriptor:         | XL    | XR     | R     |
| Range of variation:           | 39.00 | 130.00 | 20.00 |
| Trial positions within range: | 10    | 10     | 10    |

## RESULTS: Analysis 1 - Engineering Geologic Cross Section C-C' with Proposed Grading

## Spencer-Wright Method of Analysis - Circular Failure Surface

## Critical Failure Surface Search using Multiple Circle Generation Techniques

Initial failure surface approximation - Factor of Safety: 3.810      Final Angle of Interslice Forces (Theta): 10.1 degrees

## Analysis Summary

There were: 969 successful analyses from a total of 1001 trial failure surfaces (Theta filter applied)  
32 analyses terminated due to unacceptable geometry

Negative interslice forces exist on one or more slices; examine slice data and consult the GALENA Help utility.

## Results Summary - Lowest 99 Factor of Safety circles

| Circle | X-Left     | Y-Left     | X-Right    | Y-Right    | X-Centre   | Y-Centre   | Radius | FoS   | Theta | <-- Critical Surface |
|--------|------------|------------|------------|------------|------------|------------|--------|-------|-------|----------------------|
| 1      | 6230239.50 | 1852063.12 | 6230491.00 | 1852127.75 | 6230314.00 | 1852295.50 | 244.00 | 2.140 | 12.0  |                      |

RESULTS: Analysis 2 - Engineering Geologic Cross Section C-C' with Proposed Grading

Spencer-Wright Method of Analysis - Circular Failure Surface

Critical Failure Surface Search using Multiple Circle Generation Techniques

Initial failure surface approximation - Factor of Safety: 1.833      Final Angle of Interslice Forces (Theta): 7.7 degrees

Analysis Summary

There were: 969 successful analyses from a total of 1001 trial failure surfaces (Theta filter applied)  
32 analyses terminated due to unacceptable geometry

Critical (minimum) Factor of Safety: 1.01

Final Angle of Interslice Forces: 8.2 degrees

Negative interslice forces exist on one or more slices; examine slice data and consult the GALENA Help utility

Results Summary - Lowest 99 Factor of Safety circles

| Circle | X-Left     | Y-Left     | X-Right    | Y-Right    | X-Centre   | Y-Centre   | Radius | FoS   | Theta |                     |
