ALL TANKS SHALL BE INSTALLED IN STRICT ACCORDANCE WITH TANK MANUFACTURERS INSTALLATION MANUAL.

ANTI-BUOYANCY DEADMEN SHALL BE INSTALLED FOR ALL TANKS. COMPLIANCE WITH THE INSTALLATION INSTRUCTIONS AND OPERATING GUIDELINES CONTAINED IN THE INSTALLATION MANUAL ARE NECESSARY FOR THE PROPER INSTALLATION. FOR PROPER INSTALLATION OF SOME TANKS AND ACCESSORIES, IT MAY ALSO BE NECESSARY TO CONSULT SELECT SUPPLEMENTAL MATERIALS REFERENCED IN THE MANUAL. FAILURE TO COMPLY WILL VOID OBLIGATIONS UNDER THE APPLICABLE LIMITED WARRANTY FOR THE TANK(S) AND COULD RESULT IN DEATH, SERIOUS INJURY, PROPERTY DAMAGE OR TANK FAILURE. TO INSTALLER:

BEFORE INSTALLATION, READ AND UNDERSTAND THE INSTALLATION MANUAL AND ANY APPLICABLE SUPPLEMENTAL MATERIALS. AFTER TANK INSTALLATION, DELIVER THE INSTALLATION MANUAL WITH THE COMPLETED TANK INSTALLATION CHECKLIST (APPENDIX E) TO THE TANK OWNER.

TABLE PD-3. SHALLOW PRESSURE DISTRIBUTION SYSTEM MANAGEMENT REQUIREMENTS

	WORK	FREQUENCY
Inspection	 Conduct routine visual observations of disposal field and downslope area and surroundings for wet areas, pipe leaks or damage, soil erosion, drainage issues, abnormal vegetation, gophers or other problems. Perform inspections of pump and appurtenances (per O&M manual and Performance Evaluation Guidelines, Part 5 of this Manual). 	• Every 6 to 12 months.
/ aintenance	 Purge laterals, squirt and balance. Exercise valves to ensure functionality. Perform all maintenance work as recommended by equipment manufacturer for any special valves or other components. Investigate and repair erosion, drainage or other disposal field problems, as needed. Investigate and perform distribution system corrective work, as required. Record work done. 	 Distribution system maintenance annually. Other maintenance as required.
Water Monitoring & Sampling	 Measure and record water levels in trench observation wells. Measure and record water levels in dispersal field monitoring wells, as applicable, per permit requirements. Obtain and analyze water samples from monitoring wells, as applicable, per permit requirements. 	 Measure trench water levels annually. Other monitoring according to permit conditions, as applicable.
Reporting	 Report findings to DEH per permit requirements. Standard report to include dates, observation well and monitoring well readings and other data collected, work performed, corrective actions taken, and performance summary. Report public health/water quality emergency to DEH immediately. 	 According to permit conditions, typically every 1 to 2 years, depending on systems size, usage, history, location.

SYSTEM OPERATION AND MAINTENANCE

- The owner should read and operate the system according to the AdvanTexTM
- operation and maintenance literature. Orenco requires biannual maintenance servicing of the AdvanTexTM by a qualified technician.
- County Environmental Health will issue an OWTS Annual Operating Permit and requires that the property owner maintain a system service agreement/contract with a qualified third-party service provider. This
- requirement will be placed on the title deed for the property. The treatment tank is alive with important microorganisms. Do not add any total of the scum/sludge thickness is greater than 1/3 of the total liquid level
- depth. DO NOT ROUTE WATER SOFTENER BACKFLUSH DISCHARGE TO trench or an approved dispersal field.
- Repair all plumbing leaks (especially toilet leaks) promptly.
